

Aculife Magnetic Wave Therapist

Clinical Testing Report

Taipei Country Hospital gave 150 patients formal clinical observation using “Aculife Magnetic Wave Therapist (model is SMW-A01)” from July 2000 to November 2000. This product is researched and developed by Inno-Health Technology, Inc. We summarize as below:

A. Subject:

Chose 150 patients in age 25 to 75 from outpatients or inpatients. Average age is 53 years old; has medical history for 8.5 years, and are suffering from idiopathic hypertension (liver disorders). Each clinical testing table is written by patient.

B: Usage:

Divided patients into two groups at random to detect the related acupoint of disease through Aculife, and then do both acupuncture therapy and magnetic wave therapy. A course of treatment is 10 days as an observation period. For treatment: once a day, 15 minutes per session. In addition, the level of treatment depends on your adaptation. Do not take medicine for hypertension 3 days before using Aculife. If the patient can't stop taking medicine, giving them Tenormin (10 mg a kind of medicine for hypertension) twice a day, and record the rate of decrease.

The acupuncture points treated were Renying, Weizhong, Ouchi, Sanyinjiao and related acupoint of control hypertension which is shown on hand map. The result of treatment has three degrees (according to clinical symptom and the level of decrease of hypertension): outstanding effect, effect and no effect.

C. Conclusion:

After testing 150 cases, an outstanding effect was found in 115 cases; some effect was found in 25 cases; and no effect was found in 10 cases. The total effective percentage is 93.9%.

The team for treatment of acupuncture point, outstanding effect was 55 patients, Some effect was 15 patients and no effect was 5 patients. Effective percentage is 93.3%.

The other team for treatment of bioelectricity, outstanding effect was 60 cases; Some effect was 10 cases; no effect was 5 cases. Effective percentage was 93.3%.

Above two treatments for hypertension are without big difference, as P is less than 0.05 in statistical analysis. Effective time for improving hypertension is 19 minutes and best effective time is 25.5 minutes on average. The improvement can be maintained for 4 hours with a single treatment.

D. Evaluation for Aculife Magnetic Wave Therapist in Clinical Testing:

1. When using Aculife, you will have the feeling of a dull ache, numbness, or prickling sensation and bloating. Meanwhile, the effect is similar to acupoint massage and acupuncture. Aculife can adjust blood pressure, as its treatment is by

magnetic wave and bioelectricity on the acupoint of ear and hand. In addition, it can improve a series of clinical symptoms which cause hypertension. Compared with medicine, Aculife is more safe, stable, fast and without damage to liver and kidney. Aculife has the function of tepid and massage to release tiredness and improve blood circulation. This product is strongly recommended in medical field, and appeals to a lot of people.

2. There were four patients with cervical spine medical history. Patients reported that their sleep quality was enhanced, and that the symptoms of dizziness and headache were getting better.
3. Aculife Magnetic Wave Therapist is light, portable and handy, without side-effect. Many patients can accept this product easily.
4. Most patients find it difficult to detect the correct acupoint in using Aculife, due to the fact that this product is using magnetic wave to treat through acupoint of hand and ear. Accordingly, we enclosed a specification and correct hand map in order to operate it easily.
